What should I use to clean my travertine surfaces?

Q. Should I use a brush on my travertine shower floor and sides to get it clean? What kind of cleaner?

A. Using a brush along with any cleaner will generally yield better results. MB-1 should be used for general light duty cleaning. For heavy duty cleaning use MB-2. For soap scum and hard water use MB-3. Always carefully follow the directions printed on the label. You may want to download our free Stone and Tile Care Guide for more information. Also see our Stain Management App for more details about cleaning your stone and tile.
