

Oil Stain Removal

Q: What ingredients do I use to make a poultice for oil stain removal off of a stone tile? What ingredients do I use to make a poultice for oil stain removal off of a stone tile?

A: The good news is, your stone is not damaged, but simply discolored from absorbing a staining agent, in this case oil. And it can be removed. Instead of a poultice to remove the oil, our experts recommend a good degreaser, available from a hardware or big box store. Follow instructions and that should do the trick.
