

# How to Remove Lemonade Stain From Marble

**Q.** I have marble tabletop with a large lemonade stain. I found you via YouTube, and am having difficulty locating your app by name search. Thank you for helping me and so many people out there with stone staining issues.

**A.** Thanks for contacting us. Here is the link to our stain management application <https://surphaces.com/stain-management-app/>. Unfortunately, you may be dealing with more than just a stain, because the acids in lemon will etch polished marble. A stain is a discoloration, while an etch is chemical damage to the finish. Regarding the stain, try cleaning the discoloration with cold water and a mild detergent. If the stain remains, apply a poultice of poultice powder, such as diatomaceous earth or flour, and 20-50% hydrogen peroxide. This high-strength hydrogen peroxide can be found at a local beauty supply store. For further instructions on mixing and applying a poultice, including a How-To video, please visit <https://surphaces.com/stain-management-app/>. If the surface is etched, re-polish using a quality marble polishing compound. If the etching is very deep, re-honing and polishing by a professional restoration contractor may be necessary.
