

Is there an easy way to polish a marble wall surface?

Polishing a wall is time consuming but you can speed the process by using the largest drive plate you can purchase for your polishing machine. I would recommend using at least an eight inch drive plate.

Several stone equipment suppliers have machines that can be used for wall polishing. Check the resource directory and check with the companies listed there.

TIP If you use a seven or eight inch drive pad, you can place three- three inch diamonds on the drive. You will find that three diamonds work faster and will wear better than one large seven inch diamond.
