

What's the best method for cleaning a flamed granite floor. I have tried using a black stripping pad but it doesn't seem to get into the low areas, what do you suggest?

The best way to clean a flamed granite floor is to use a brush known as a nylogrit brush. These brushes are designed to reach into the low areas of uneven surfaces such as flamed granite. Nylogrit brushes are available at most janitorial supply houses.

TIP Several pad manufacturers have available uneven pads that are designed for reaching into low areas. Check with your local janitorial supply house.
