

**What's the best method for cleaning a flamed granite floor. I have tried using a black stripping pad but it doesn't seem to get into the low areas, what do you suggest?**

The best way to clean a flamed granite floor is to use a brush known as a nylogrit brush. These brushes are designed to reach into the low areas of uneven surfaces such as flamed granite. Nylogrit brushes are available at most janitorial supply houses.

***TIP Several pad manufacturers have available uneven pads that are designed for reaching into low areas. Check with your local janitorial supply house.***
