

Which works better on granite, diamonds or bricks?

Diamonds and bricks both work well on granite but the final results will depend on the skill of the operator. Generally bricks require the use of an Italian grinding machine and a much higher degree of skill than diamonds.

Diamonds are much easier to use and today's technology is improving to the point where diamonds will be the only abrasive necessary to restore granite.

TIP If you decided to use bricks, make sure you purchase bricks that are designed for granite.
