

My granite vanity top has gold/brass fixtures. What can I use to clean the granite without damaging the fixtures?

For daily and light cleaning, use a good stone soap, which will not harm the gold or brass fixtures. For heavier-duty cleaning, remove the fixtures or protect them with masking tape. Be careful when using acidic cleaners, since acids will tarnish the fixtures.

CAUTION *When taping brass and gold fixtures it is important to use a tape that has low contact. Duct tape and masking tape may damage these fixtures by removing the gold plating when the tape is removed.*
