

My bathroom marble floor is very slippery when I get out of the shower. Is there any treatment I can put on the floor to keep it from getting slippery?

Although there are several coatings that will provide added slip resistance, there is, unfortunately, a trade-off. Coating the stone will increase maintenance requirements, but if safety is an issue, it's worth considering. Contact a stone maintenance supplier or janitorial supply for recommendations.

TIP There are several companies who sell slip resistance treatments that can be used on granite. However, these treatments can ruin the shine on the granite and will increase maintenance requirements.
