

How can I clean the black soot off my marble fireplace hearth?

Several products are designed specifically for cleaning soot and carbon build-up from marble. Contact your marble supply house. Be sure the product is not an acid; apply it per the manufacturer's directions and allow it to sit on the marble for 10–20 minutes. Agitate lightly with a soft-bristle brush and thoroughly rinse it from the surface. Repeat this procedure if the first application does not clean all the soot from the marble.

***TIP** You may first want to try a solution of ammonia and water. Apply the solution and agitate with a soft bristle brush. Rinse thoroughly.*
